PROJECTS/EXPERIENCE

Experience Across the board

I use Azure, user stories, C#, .NET, SQL, JavaScript, Agile, and many other skills daily. Please feel free to reach out and ask.

Updating Backend Email Logic— *Cordova*

Backend email logic has been successfully updated to account for the type of application using our client's product. This has involved systematically refining the email service to transmit tailored information based on the specific application type. To achieve this, we have modified a stored procedure to retrieve and provide the required data and modified the .Net service class to get the correct data. This was then tested through postman and along with manual testing using Kestrel before being sent up to our QA testers.

Updating tool and frameworks— *Streck*

Started research in implementing Azure's Git. Moving frameworks to the latest supported version (.Net Framework 4.6.2 -> Core 3 & Core 6).

Past Due Calculations — *Nelnet*

Adding logic to filter through requested terms for a payment platform, compare them against all terms a student had charges and/or payments, and figure out the difference in the balance of what was not requested and return it in XML (.Net Framework 4.8).

Automation of Merges with third party code — *Nelnet*

Creation of PowerShell scripts that took care of a lot of manual processes that were involved with code merges with third party code. This included moving .dll files around to the according areas, building in a specific order, checking for version numbers AND having the ability to have a console to approve of the version on number or manually update it. This was extremely fun, please ask about it (PowerShell, Git, Framework 4.8).

EXPERIENCE

SKILLS

- .Net Framework 4.6.2, 4.8, & Core
- C#
- MVC Pattern
- JavaScript
- Azure Experience
- Angular
- Blazer
- Agile Development
- PowerShell
- MySQL
- Visual Studio and VS Code
- Customer service skills
- Windows Servers (2016)
- Git/GitHub
- IIS
- Ability to learn and use different SDK
- REST Apis

Communication and Leadership

- Obtained Eagle Scout
- Responsibility of Colleague ERP coding enhancements and support.
- Took responsibility for increasing productivity through the use of automation and scripts (self-taught).
- Utilized effective communication skills in the form of email, team meetings, and chat applications such as teams through my current

Cordova, Omaha— Software Engineer (contracted)

June 2023 - PRESENT

Tasked with Azure User Stories to update different projects.
